Phishing Email Header Analysis Report

Date: 24 June 2025

Analyst: Suyash Nalawade

Tool Used: MXToolbox Email Header Analyzer

Email Header Analysis Summary

The analysis was performed using MXToolbox. The key findings are summarized below:

Parameter	Result
SPF	PASS
DKIM	PASS
DMARC	QUARANTINE (email flagged but allowed)
Sender IP	172.82.242.28 – Not blacklisted
Return-Path	bounce@campaign1.nipponindia.email
Delivered To	suyashnalawade01@gmail.com

Conclusion

Based on SPF, DKIM, and DMARC checks, this email appears technically valid. The sender IP is not blacklisted and is authorized to send on behalf of the domain. However, DMARC policy flags the email for quarantine. This means the email should be treated with caution and the content must be reviewed to ensure no phishing links or messages are present.
